PunkStrategy × NFTStrategy — One-Pager

We are not market makers. We are strategy vaults. | +20% fixed list premium | No timing | Buy more on dips

Vision

From fee-taking marketplaces to a protocol where fees fund floor buys and token burns. Real collectors set the price; fast-flip noise fades.

Mother Strategy: PunkStrategy (Macro Flywheel)

- Anchor: CryptoPunks (the BTC of NFTs).
- BUY: fees → immediate floor buys; reverse-weighted DCA vs 30-day MA (buy more when lower).
- SELL: list at floor × 1.20 only—no discounting for turnover.
- PROCEEDS: 100% buyback & BURN of $PNKSTR → visible deflation pulses.

Three Value Lines (Platform Token Thesis)

- Mother Line — ~1% of aggregate notional from all NFTStrategy trades buys & burns $PNKSTR$ daily.
- Asset Line — accumulate Punks through cycles; discharge at +20% in strong markets to trigger burn pulses.
- Network Line — $PNKSTR$ repricing ↔ more strategies onboard ↔ thicker mother line.

Child Strategies: NFTStrategy (Micro Flywheels)

- Fees → floor buys; list at +20%; sell to willing collectors only.
- Sale proceeds 100% buy & burn the collection's strategy token; protocol 10% flows back to $PNKSTR$.
- Unified rule: delete Blur-style fast flips—this is strategy trading, not market making.

For Creators / Collections

- Sustainable cash flow: 10% protocol return. Use ≥70% to buy & lock/burn your strategy token; ≤30% for brand-meaningful vault buys.
- Stabilizer: vaults absorb homeless floors and release to real collectors at the right time.
- Long-term alignment: compound into token capital structure, not short-term floor spikes.

For Marketplaces & Aggregators

- Zero-fee zones: front-end 0%; protocol fees auto-route to vaults & burns—every trade reinforces the loop.
- Co-governance: hold $PNKSTR$ to share mother-line + burn-pulse beta.
- Transparency: on-chain proofs; multisig + timelock; verifiable fallback fronts.

Public Weekly Proof (Four Charts)

- Mother burn: Burn_mother / Float (from all NFTStrategy flows).
- Asset accumulation: Punk count & average basis vs floor.
- Deflation pulses: Punk sales → $PNKSTR$ burns (amounts + tx hashes).
- Network expansion: active strategies, new-strategy volume share, zero-fee DAU.

Tagline: Buy the floor, list +20%, burn the platform.
